Digital Pressure Gauge Model DSD

Description

The DSD features a ceramic pressure sensing element which provides superior stability and exceptionally long cycle life for pressure ranges up to 8700 PSI. Ranges above 8700 PSI utilize a stainless steel pressure sensing element. The DSD is available in battery powered or 24VDC powered versions which feature a 4 digit LCD rotatable display. Zero (tare), peak hold, relay, and analog output features are controlled by push-button access to the programming menu which has a password protection capability. The optional relay output switching point is fully adjustable along with the hysteresis. The analog output signal options, available for remote transmission of the measured values, have adjustable start and end points and are also adjustable via the front key panel.
